

INSTRUCTIONS FOR CONSTRUCTION CONTRACTOR ENVIRONMENT, SAFETY AND HEALTH REQUIREMENTS

These instructions provide an overview of the Laboratory's Environment, Safety and Health (ES&H) expectations for contractors. The Laboratory's expectations include a set of requirements which assures that contractors have a complete and integrated ES&H program and that their program be aggressively implemented. The Laboratory requirements are detailed in Appendix A of the Argonne Terms and Conditions which is provided to the successful contractor. Appendix A includes the clause, "Environment, Safety and Health", which defines contractor ES&H requirements including the Laboratory's contractor disciplinary program.

Within ten days of award of the contract, the contractor must submit the following:

A. Contractor ES&H Program and Implementation Plan

A comprehensive safety plan addresses all of the hazards expected to be encountered in the performance of the proposed contract. The plan must address how the contractor will implement the plan, including the designation of competent and responsible personnel. Attachment No. 1 - ESH Program and Implementation Plan Guide, PFS-526 (8/01), is a guide the Laboratory uses to evaluate proposed plans and may be useful in developing your proposed plan.

B. Environmental Plan

If required by the project specifications, the successful Contractor shall submit an Environmental Plan which addresses the potential environmental impacts of this work.

- a. If the work involves excavation, an erosion control plan will be required. This plan shall include the location and description of the area being excavated, the sewers, waterways, and roads to be protected, the erosion control measures to be installed, and a map of the area.
- b. A description of the erosion control installation, maintenance and inspection procedures and schedules, and a plan for the removal of the erosion control measures should also be included.

C. Job Safety Analysis (JSA)

The JSA is a detailed analysis of the steps taken to complete each phase of the job, a detailed analysis of the hazards of each of those tasks and the mitigation actions that will be taken to eliminate or minimize the exposure to those hazards. Further information on preparation of a JSA is available from the National Safety Council and other professional safety organizations. Attachment 2 - Construction Job Safety Analysis, PFS-527 (10/01), is a form that can be used to document the JSA and the Contractor Safety Orientation.

D. Contractor ES&H Representative

This is the contractor's designated competent member of his organization responsible for the implementation of the contractor's ES&H Program on the Laboratory site. This member must have the authority to fulfill this responsibility and must be on site during the entire job.

The Laboratory will review and must approve the above submittals prior to the start of work. Typically, after approval of these submittals, a pre-construction meeting is held by the procurement department to collectively review these documents and address open issues.

Before any contractor employee is allowed to start work at the Laboratory, the contractor employee must attend the Contractor Safety Orientation and the Job Safety Orientation.

E. Contractor Safety Orientation

A 1.5 hour training class provided by the Laboratory four days per week at 7:30 a.m. There is no cost to the contractor for this training.

F. Job Safety Orientation

The contractor ES&H representative shall instruct each contractor employee on the details of the Job Safety Analysis for this work. Each contractor employee must read and sign the Job Safety Analysis and this document must be available at the job site at all times. Also, prior to starting work in some Laboratory buildings, the Contractor employees must attend a Building Orientation.

Other items that must be posted or available at the job site include MSDS sheets, DOE poster, emergency phone numbers, workers compensation notice, all permits and all approved hazard specific plans.

Prior to the use of tools, the Laboratory will conduct a tool and equipment inspection.

G. Tool Inspection

Upon arrival, the Laboratory will inspect contractor tools for compliance with OSHA, ANL, and other applicable requirements and industry standards. Unsatisfactory tools must be tagged out of service and removed from the ANL site at the end of the work shift.

As dictated by the scope of work and the mitigating actions necessary to address specific hazards, additional hazard specific plans or permits may be required. Examples of these include, but are not limited to:

H. Open Flame Permit

I. Electrical Hot Work Permit

J. Respiratory Protection Plan

K. Confined Space Entry Plan

- L. Asbestos Abatement Plan
- M. Work Entry Permit
- N. Dig Permit
- O. Coring Checklist
- P. Fall Protection Plan
- Q. Hoisting and Rigging Plan

The contractor shall work with the Laboratory in planning for, developing as needed, and obtaining approval of these plans and permits.

R. Laboratory Site Rules and Safety Requirements

The Laboratory enforces a series of site rules and requirements. Not unlike other large sites, the Laboratory specifies unacceptable contractor employee acts or conduct, and provides a listing of site safety requirements addressing areas of frequent violation and/or serious hazard potential.

S. In Case of Emergency

The contractor must immediately report all accidents and unauthorized releases to the environment. Follow-up actions such as written reporting of the incident along with corrective action is mandatory.

The Laboratory has a well established contractor safety program. Our goal is for work at the Laboratory to be free of incidents that threaten the environment, the safety and health of contractor and Laboratory employees and the public, or the safety of personal, contractor or Laboratory property.

| * | _____ |
| * | _____ |
| * | _____ |

*Use separate sheets as necessary.

Basic Safety Rule Reminders:

1. Safety hat, safety glasses with side shields, and hard sole leather work boots that provide ankle protection are required as a minimum.
2. Inspect all tools and equipment for OSHA compliance before use.
3. Fall protection required when working heights above 6 feet when handrail or other fall protection is not provided.
4. Flag work areas and post warning signs.
5. Ground fault circuit interrupters (GFCI's) are required on all 110 and 120 volt receptacles.
6. Stairways, passageways, and access ways must be kept free of materials and equipment.
7. Orderly housekeeping shall be maintained.
8. Report all injuries/illnesses and near misses.
9. Metal ladders are prohibited.
10. **NO DUMPING OF ANY KIND IS PERMITTED ON SITE WITHOUT USE OF A QUALIFIED AND COMPETENT SPOTTER.**
11. Any laser use (class 31, 3b, or 4) requires ANL ES&H review.

Job Title: _____

Superintendent: _____

Company (not ANL)

ES&H Rep: _____

The ESH representative is responsible to see that all truck drivers receive first hand instruction to alert them to all hazards, particularly aerial hazards.

All trucks must lower their beds before driving away after dumping their loads.

This instruction to the drivers may be communicated by any of the contractors personnel, but the ESH Rep is the responsible person to see that this information is properly conveyed to the drivers.

A SPOTTER IS REQUIRED FOR ALL DUMPING OPERATIONS IN ORDER TO AVOID DAMAGE TO ANL PROPERTY.

IN ADDITION TO THIS JSA, ALL CONTRACTOR EMPLOYEES AND ALL SUB-TIERS ARE REQUIRED TO FOLLOW THE CONTRACTOR'S APPROVED CORPORATE SAFETY PLAN. A COPY OF THE APPROVED PLAN IS AVAILABLE WITH THIS APPROVED JSA.

ES&H information relative to this job has been reviewed with me by my company ES&H representative.
